

WC/2024/227 - ADMISSIONS / MEDICAL / STRESSOR CROSS-MAP**INTERNAL WORKING SCHEDULE - NOT FOR FILING OR SERVICE WITHOUT REVIEW**

Purpose. This schedule records the final architecture used in the integrated Form 9A: each stressor can stand on its own; overlap is deliberate; clinical documents are used for reported history, diagnosis, effect and capacity rather than to prove disputed workplace events. It also records the boundaries deliberately left out of the admitted-fact core.

Section / issue	Admitted factual spine / record	Medical linkage	Why the overlap matters	Boundary / status
Medical baseline	Role/duties and admitted document references; work capacity certificates; Review Decision 69983, especially facts 261-262.	M1: 16 Nov 2023 sleep/shift-work entry; 16 May 2024 referral listing prior ADHD/anxiety; 28 Jun and 1 Jul presentations. M2: no-capacity certificates 1 Jul-6 Oct 2024. M3-M4: diagnosis and treating history. M7: 2026 capacity. M8: review decision. M9: Respondent medical admissions.	Creates one chronological medical spine into which the three stressors are linked, without requiring a separate diagnosis for each event.	Do not say there was no prior anxiety/ADHD. Correct formulation: no diagnosis or treatment for depression before June 2024. M6 clinical records remained outstanding at the schedule date.
Stressor 1(a)-(d): duty, access, repair path, criticality	Facts 5-10, 39-48, 283, 289-291.	M1 28 Jun report; M4 management/rostering history.	Same system facts explain the operational condition: accuracy remained a duty while direct database access was removed and the repair path was held by others.	Admitted core.
Stressor 1(e)-(f): process changes and consultation	Facts 49-55, 111-113, 162-166, 273, 180-181, 167-177, 101; Certified Agreement cl 3.2 / 4.1.4 relied on as instruments.	M1/M4 only for reported history/effect.	Shows both the content of the changes and the process by which they were introduced. Repetition with later console events makes the stressor self-contained.	Do not attach a fictitious Form 24 fact number to the Certified Agreement wording.
Stressor 1(g): misdirected emergency calls	Facts 56-69.	M1 28 Jun "stress at work" / "upset by people not following rules"; M4 for later treating history.	Connects the operator duty to the employer-recorded reports arriving while the changed process was in force.	Admitted core.
Stressor 1(h): Integrated Respiratory Service	Facts 89-110.	M1/M4 as above.	Shows a second, separate operational example of an inaccurate directory entry reaching the console and the timing of the response.	Admitted core.
Stressor 1(i): manager hours / 15 May request	Facts 3-4, 70-88, 113.	M1: 16 May referral is the next day but the final pleading expressly alleges timing only, not causation.	Explains why stated office hours mattered to the repair/escalation route and preserves the 15 May sequence as its own proposition.	No PID or reprisal inference is drawn from timing.
Stressor 1(j)-(k): Communication Book and Aug/Sep 2023 context	Facts 143-153, 288; 155-158, 160-161, 26-38.	Context only; not assigned separate medical causation.	Preserves the chronology of issues raised and responses without making them independent causative stressors inside Stressor 1.	Fact 154 not admitted. Facts 159 and 292 deliberately omitted from the filing draft and reserved for cross-examination.
Stressor 1(l)-(m): pandemic leave / authority	Facts 114-142, 126-131.	Context within Stressor 1.	Kept in the Stressor 1 chronology, but repeated under Stressor 2 for the distinct remuneration/entitlement function.	Not an independent causative component of Stressor 1 in the final architecture.
Stressor 1(n)-(o): PID / workplace representation	PID chronology stated without an attached admitted fact; union/delegate facts 178-181, 293-294.	None for causation.	Retains chronology without using it to imply reprisal or motive.	PID paragraph expressly outside admitted-fact core. No retaliatory connection alleged.
Stressor 1(p)-(q): employer systems / no discipline	Facts 12, 263-272, 300-302.	M1/M4 may link reported management/rostering history; M7 capacity only.	The employer's own 5 Jun 2026 statements are repeated in Stressor 3 because they also bear directly on fatigue-system conditions.	Admitted core; context paragraph limits the use of non-causative chronology.

Section / issue	Admitted factual spine / record	Medical linkage	Why the overlap matters	Boundary / status
Stressor 2(a)-(e): payroll / public holidays / AVAC chain	Facts 37-38, 182-210, 241, 255-256, 296-298.	M1 1 Jul: pay withheld at times / overtime not processed. M4: later history of pay delay and financial stress.	Payroll facts are told as a complete chain: error identified -> correction required through line manager -> not corrected as at 13 May -> later AVAC status / missing references.	The medical records prove reporting and effect, not the payroll transactions.
Stressor 2(f): paid Special Pandemic Leave entitlement	Facts 114-142, 126-131, 133-139.	No separate diagnostic attribution; used within the remuneration course.	Deliberate repeat of Stressor 1(l)-(m), now for a different function: handling of a paid employment entitlement, repeated submissions, and decision authority.	Do not characterise this as unpaid wages unless payslip evidence separately proves that. The final Form 9A pleads the entitlement/process, not an unsupported non-payment.
Stressor 2(g): rostering/fatigue raised with HR	Facts 222-223.	M1/M4 roster history.	Links the remuneration issue to the contemporaneous HR escalation about rostering practices and the fatigue guideline without merging Stressors 2 and 3.	Admitted core.
Stressor 3(a)-(m): roster and fatigue	Facts 156-157, 287, 30-31, 33, 35, 28; 211-221; 299; 171-175; 284, 227, 234; 251; 257, 285-286; 224-226, 232-233; 268; 235-240; 242-254; 263-272; 258-262.	M1 1 Jul: "lates then earlies"; M4: management/rostering; M8: seven-hour break and review finding; M7: continuing effect/capacity only.	Stressor 3 is told as a complete story from earlier roster errors, to the March shifts, the April enquiry, employer policy/system evidence, and the review findings. System facts 263-272 are repeated rather than imported from Stressor 1.	Fact 159 omitted. Facts 228-231 were not admitted; specific emergency-register counts are not in the admitted core. Wakefulness/travel/sleep estimates are also excluded from the admitted core.
Post-injury course	Medical certificates show no capacity 1 Jul-6 Oct 2024. Appellant outline gives notice of meetings/contacts during certified leave, employment ending under abandonment provisions with effective separation date 20 Sep 2024, and later reinstatement.	M2 certifies incapacity. Later medical/return-to-work materials can address continuing effect/capacity only unless otherwise admitted.	Explains later chronology without contaminating the June 2024 causation case.	Not part of admitted-fact core. The effective separation date falls within the certified period; the later October notification/processing is not described as occurring while the final certificate remained current. Reese contact is framed as proposed oral evidence, not an admission.
Contemporaneous WorkCover record	Facts 274-282: Jul-Aug 2024 material supplied to WorkCover; 11 Aug 2026 particulars bundle after Respondent pleaded lack of particulars.	Supports timing/context, not medical causation.	Shows that core documents/stressors were identified before the later pleading architecture and that particulars were subsequently served.	Admitted documentary record.
Legal architecture	Rule 49 admissions; s 32(1) and s 32(5)(a); Prizeman [2005] QIC 53; Delaney [2005] QIC 11; Mahaffey [2016] ICQ 10; Langerak [2020] ICQ 2 at [86].	Medical evidence is assessed together with admitted employment factors.	Supports independent stressor analysis plus a whole-injury / whole-evidence assessment where appropriate.	Final filing draft removes the earlier incorrect Prizeman citation and does not use the "presumption" formulation.
Cross-examination reserve / excluded material	Facts 159 and 292; Respondent witness-outline material dated 24 Sep 2026; unadmitted facts 154 and 228-231.	None in chief unless independently admitted/proved.	Keeps the filed pleading tied to its evidentiary footing and avoids turning cross-examination material into pleaded evidence.	INTERNAL ONLY. Do not copy this row into the filed pleading without a deliberate decision.

Final internal checks completed: no placeholder paragraph numbers remain; ECC corrected to Tab M7; clinical-record placeholder remains Tab M6; Review Decision is Tab M8; facts 159 and 292 are out of the filing draft; facts 154 and 228-231 are not treated as admissions; the post-injury abandonment wording distinguishes the effective separation date from the later October communication/processing; and the pandemic-leave sequence is repeated under Stressor 2 for the remuneration/entitlement function.
