Hi Cory,

Thank you for reaching out.

Yes, we do provide the services aligned with your outline below.

The most applicable is a Psychosocial Risk Infrastructure Audit. This include a review of all internal data as you have outlined in your email (surveys, reporting systems, claims, rosters, policies), as well as interviews with stakeholders across the organisation which generally involves a mix of work, health and safety, human resources, senior executives, HSR's and workers where risk is indicted.

This Audit is comprehensive and provides in-depth report and briefing with specific recommendations where the organisation can improve its system of work for complying with relevant state based regulations and codes of practice, and the ISO standards.

Costs for the audit range between \$10-30,000 dependant on the size of the review and number of interviews, a more definitive price can be provided once the client is available to scope the project.

We also offer psychosocial risk assessments - an independently run survey hosted and facilitated by Psychgroup, and may also include qualitative

interviews, this screens for all active psychosocial hazards across an organisation or work area and is followed by a comprehensive report with recommendations. Risk assessments are free as part of any Partner Program, to enable the organisation to fully implement recommendations across a 12 month program, brochure attached.

In terms of role related risk assessments, this is certainly something we can offer as part of a role related risk assessment and make recommendations of general controls to mitigate role related risks. However, for an individual role related psychosocial risk assessment to inform either fitness for work, return to work or to guide a medical practitioner, this would be a separate service and individualised to the employee.

I hope this helps, please pass these details on to your relevant contact within the hospital for a more definitive scoping and costing as required.

Warm regards,

**Sarah Hellwege**

**Subject:** Request for indicative proposal — psychosocial risk assessment, 24/7 hospital switchboard (Brisbane region)

Good morning,

I am seeking an indicative proposal — scope, approach and fee range — for an independent psychosocial risk assessment of a 24/7 hospital switchboard room in the Brisbane region: a small team of operators on a rotating roster across day, evening, night and weekend shifts, handling a high daily call volume including emergency codes and distressed callers.

The assessment contemplated would be conducted under the Managing the risk of psychosocial hazards at work Code of Practice 2022 (Qld) and consistently with ISO 45003, and would include: review of recorded data (call demand, rosters, leave, incident and complaint records); the People at Work survey; on-site observation across shift types, including night and weekend shifts; interviews offered to all operators; risk rating with a controls report; and a twelve-month review point.

For transparency: I am an employee of the workplace concerned, preparing a contribution to a consultation process about how such an assessment might be conducted. Any engagement would be commissioned

by the employer, not by me. At this stage I am asking only:

whether this is within your service scope;  
your indicative approach;  
an indicative fee range for an assessment of this size;  
your current availability; and  
one scope question — whether the assessment's deliverables could include a statement of the role's psychosocial demands and working conditions in a form suitable for use by treating medical practitioners when providing fitness-for-work, restriction and adjustment opinions for workers in the room.  
I'm happy to take this by email or a short call.

Kind regards,  
Cory Shepherd
